This standard defines “firmware” as software written specifically for embedded micro-controllers, typically with a minimal “operating system” (real-time kernel), if any. This document is concerned with coding practices and conventions applied to source code written in the C programming language.

MJB Embedded C Coding Standard - mjbauer.biz

Barr Group's Embedded C Coding Standard was developed to minimize bugs in firmware by focusing on practical rules that keep bugs out--while also improving the maintainability and portability of embedded software. The coding standard details a set of guiding principles as well as specific naming conventions and other rules for the use of data types, functions, preprocessor macros, variables and much more.

This creates a problem when linking to C code as C function names are not mangled. When calling a C function from C++ the function name will be mangled unless you turn it off. Name mangling is turned off with the extern "C" syntax. If you want to create a C function in C++ you must wrap it with the above syntax.
