Evolution Answer Key for Review Packet

Evolution, theory in biology postulating that the various types of plants, animals, and other living things on Earth have their origin in other preexisting types and that the distinguishable differences are due to modifications in successive generations. The theory of evolution is one of the fundamental keystones of modern biological theory.. The diversity of the living world is staggering.

evolution | Theory, Examples, & Facts | Britannica

I am an undergraduate student enrolled in an Evolution course and we are required to write a ten page paper on anything pertaining to evolution. I was wondering if anyone had any idea's to help me out. I don't want something where there is not a lot of information about (such as evolution from a lysosome to a prokaryote), but not as broad as the evolution of birds.

The answer to this question is challenging, since paleontologists have only partial information on what happened when. So far, scientists have been unable to detect the sudden "moment" of evolution for any species, but they are able to infer evolutionary signposts that help to frame our understanding of the emergence of humans. Strong evidence supports the branching of the human lineage ...
