Read Free Key To Psathyrella And Related Species Vielepilze recognized by its dark, mottled gills, its nearly black spore print, its hairy ("fibrillose," in Mycologese) cap, and the ring zone on its stem. The Northeast Chinese species of Psathyrella (Agaricales ... Sporophores of a new Psathyrella species have been reported for the first Page 12/28

### Key To Psathyrella And Related Species Vielepilze

The border line between Psathyrella and Panaeolus has always been confusing, even before contemporary DNA studies (see the linked page for more information), and we are learning that some species of Psathyrella are more closely related to coprinoid mushrooms in the genera Coprinellus and Coprinopsis than they are to some other species of Psathyrella. For more information see Matheny and collaborators 2006, Vasutova and collaborators 2008, and Padamsee and collaborators 2008.

### The Genus Psathyrella (MushroomExpert.Com)

Psathyrellas are related to most inky caps, except they do not have the enzyme to turn to ink and the caps are not strongly striate. Both have dry caps, usually attached gills, black (or very dark) spores and they often have white stems. Only occasionally is there a partial veil leaving a ring. They are all saprophytic.

### Psathyrella and Panaeolus

Psathyrella is a large genus of about 400 species, and is similar to the genera Coprinellus, Coprinopsis, Coprinus and Panaeolus, usually with a thin cap and white or yellowish white hollow stem. The caps do not self digest as do those of Coprinellus and Coprinopsis. Some also have brown spores rather than black. These fungi are often drab-colored, difficult to identify, and all members are considered inedible or worthless (for eating) and so they are often overlooked.

### Psathyrella - Wikipedia

It includes most of the ink-cap species once placed in Coprinus. Phylogenetic data led to the

restriction of *Coprinus* to *C. comatus* and allies. *Coprinus* now contains just a few species unrelated to most of the remaining ink-caps, and *Coprinus* is now placed in a different family, the Agaricaceae. The same data led to the recognition of a number of related genera within the psathyrellaceae: *Coprinellus*, *Coprinopsis* and *Parasola*.
