Inhibitory control, i.e., the ability to stop or suppress actions, thoughts, or memories, represents a prevalent and popular concept in basic and clinical neuroscience as well as psychology. At the same time, it is notoriously difficult to study as successful inhibition is characterized by the absence of a continuously quantifiable direct behavioral marker. It has been suggested that the P3 ...

The P300 as marker of inhibitory control - fact or fiction ...

SSDs have much lower random access and read access latency (less than 100 μ s) than HDDs do (where latency ranges from vs. 2.9 ms to 12 ms), making them ideal for both heavy read and random workloads. That lower latency is the direct result of flash SSDs' ability to read data directly and immediately from a specific flash SSD cell location.

Fact or fiction? Flash SSD storage is faster than HDD storage

A service developed by University of Michigan researchers called Infiniswap made this technology—called "memory disaggregation"—feasible in 2017, but it still suffered from several latency overheads that made real-world adoption unlikely. Now, a new system from the same lab called Leap improves upon this and other disaggregation solutions by applying a technique called prefetching to ...
