In *The World and Principles II*, Descartes deduces the principles of physics (the laws of nature) from the first principle of metaphysics: God. The laws of nature can be deduced by reason alone from God's immutability (see AT 11: 36-48, CSM 1: 92-98; AT 8A: 6167, CSM 1: 240-244).

Principles Of **Philosophy Summary**

Descartes's metaphysics is rationalist, based on the postulation of innate ideas of mind, matter, and God, but his physics and physiology, based on sensory experience, are mechanistic and empiricist.

“Father of Modern
Philosophy.” This title
is justified due both to
his break with the
traditional Scholastic-
Aristotelian philosophy
prevalent at his time
and to his development
and promotion of the
new, mechanistic
sciences.

Principles Of Descartes - The Value Of...

Principles of Philosophy
Descartes intended the Principles of Philosophy to be his magnum opus, the synthesis of all his theories in physics and philosophy. The book, therefore, is full of information, but it is conveniently divided up into four easily digestible parts.
