Peer Review: The Fallacy of Fine-Tuning

"The Fallacy of Fine-Tuning" is the latest science-driven book by the great author and physicist Victor J. Stenger. In this book, Dr. Stenger tackles the controversial topic of fine-tuning in a thorough and compelling manner. This methodical 345-page book is composed of the following sixteen chapters: 1. Science and God, 2.

In his book *The Fallacy of Fine-Tuning*, Stenger claims that arguments theists make about fine-tuning can be easily refuted. Following the tone of my blog, I will try to discuss this issue in a non-technical way. The astrophysicist Luke Barnes wrote a long technical article refuting Stenger's claims which I highly recommend.

Dr Michael G Strauss: Is Fine-Tuning a Fallacy?

If someone wins a lottery every time a lottery takes place, then there is no "fine-tuning" for winning, even though the "odds of winning" are a billion-to one.. However, if one particular person wins every lottery, then there is fine-tuning. Fine-tuning requires the same thing to happen every time.

If you change one of the constants even by a tiny bit, the world will look very very different - it will generally have no suns, no chemistry, and - therefore - no life. This is known as "fine tuning". The Fine Tuning Argument argues that fine tuning indicates that the universe is designed to support life.

Fine Tuning Argument | Atheism | Fandom

The argument from fine tuning asserts that the conditions necessary to support life as it exists on Earth are so specific and narrowly defined, and the odds of such conditions emerging by random chance so remote, that the existence of a deliberate guiding force or creator may be shoehorned inferred.

Fallacy mentioned (but did not rely on) the no-brainer solution to the fine-tuning problem that is regarded as the most plausible by most physicists and cosmologists: Our universe is just one of an unlimited number of individual, uncreated universes collectively called the multiverse that extend for an unlimited distance in all directions and for an unlimited time in the past and future. We just happen to live in the particular universe that is suited for our kind of life.

By Bayes' theorem, the ratio between the two posteriors is $P(D | R) / P(\neg D | R) = P(R | D) P(D) / P(R | \neg D) P(\neg D)$. Proponents of the argument from fine-tuning for design argue that, in view of the required fine-tuning, life-friendly conditions are highly improbable if there is no divine designer.

Overview. A number of authors have noted that if some physical parameters were slightly changed, the universe could no longer support life, as we know it. This implies that life depends sensitively on the physics of our universe. Does this "fine-tuning" of the universe suggest that a creator god intentionally calibrated the initial conditions of the universe such that life on earth and the evolution of humanity would eventually emerge?

Universe Is Not ...

It must be due to some intelligent, powerful Being -- and that's what God is. The fine-tuning argument is a modern, up-to-date version of this argument. It takes off from something that serious physicists, religious or not, tend to agree on. Here's how Freeman Dyson put it:

The Fine-Tuning Argument for God | Philosophy Talk

The characterization of the universe as finely tuned suggests that the occurrence of life in the Universe is very sensitive to the values of certain fundamental physical constants and that the observed values are, for some reason, improbable. If the values of any of certain free parameters in contemporary physical theories had differed only slightly from those observed, the evolution of the Universe would have proceeded very differently and life as it is understood may not have been possible. Va

Fine-tuned universe - Wikipedia

This is a very able rebuttal of the "fine tuning of the cosmological constants" argument which has been proposed by some scientists and layman writers, claiming that there a form of Physicist God who has engaged in an act intelligent design to create the Universe as we know it. Dr. Stenger presents a very thorough and even tempered argument showing that the constants really appear as a result of units of measurement of fundamental physical quantities such as mass, charge, length, and time.
